

# HISTORICAL DATA 55 2021

**TEMS**  
INTERNATIONAL

TEMS International is an independent provider of environmental management and compliance services to the global oil and gas industry. Our services are focused on managing and optimising drilling performance and drilling waste in real time, while ensuring an asset remains in environmental compliance. Ultimately, our experienced team aims to reduce drilling costs and ensure legislative compliance targets are met or exceeded.

- Location: **Gulf of Mexico**
- Project date: **July 2021**
- Drilling duration: **22 days**
- Total footage drilled: **2,228ft**
- Total estimated saving: **\$2,130,266**
- Estimated SBM savings: **22 barrels**
- Shaker screens repaired: **43**

## OUTLINE

In 2021, TEMS International was contracted by an existing client, a leading international E&P company, to support a drilling and completions programme in the Gulf of Mexico. The deepwater project was undertaken in July 2021, with TEMS International engineers overseeing more than 2,200ft of drilling.

TEMS International provided its drilling performance management and optimisation, continuous environmental compliance legislation and carbon footprint reduction services during the project. Prior to the project commencing, TEMS International engineers conducted an extensive audit to identify potential issues regarding the containment of drilling fluids, diesel fuel and other hydrocarbons used in the daily operations onboard the rig. These observations were either resolved prior to and during drilling operations, depending on their seriousness, or recommendations made to implement improvements.

The overall aims of the project were to:

- Adhere to governmental discharge policies
- Optimise solids control equipment to deliver maximum solids removal with minimum liquid retention
- Reduce synthetic based mud surface consumption
- Reduce shaker screen consumption
- Minimise environmental impact

## SERVICES DELIVERED

### Drilling performance management and optimisation

A process approach to drilling performance management that adds value to the entire drilling process. The service aims to ensure more effective and efficient drilling – reducing drilling days – through optimised fluid management and effective solids control management with the overriding proviso of safety and environmental protection.

### Continuous environmental compliance legislation

Leading guidance on environmental compliance, prior to and for the duration of a drilling campaign. The comprehensive technical services and environmental consultancy enable well planners to ensure permits are in place, and that drilling operations keep pace with, or exceed, the evolving compliance regulations of drilling locations.

### Carbon footprint reduction

Monitor and report the ways in which greenhouse gas emissions can be reduced by optimising drilling performance. The service monitors the emissions of an installation and highlights the cumulative environmental benefits of using less drilling fluid, which includes transportation, shipping and treatment.

<b>\$2,130,266</b>	<b>Total savings for well</b>
<b>\$2,061,098</b>	<b>Estimated waste fluid savings</b>
<b>\$45,900</b>	<b>Saved on dryer costs</b>
<b>43</b>	<b>Shaker screens repaired</b>
<b>4.78%</b>	<b>Average ROC rate achieved</b>
<b>Carbon footprint</b>	<b>Of drilling asset was reduced</b>
